PRESS RELEASE

FOR IMMEDIATE RELEASE

eezi by VAT IT Partners with [Consilio.io](https://consilio.io) to Bring Embedded E-Invoicing Compliance to SAP Concur Customers

New partnership pairs eezi's global e-invoicing compliance engine with [Consilio.io's](https://consilio.io) SAP Concur implementation expertise, embedding automated AR and AP e-invoicing directly inside Concur Invoice and Concur Expense.

eezi by VAT IT has partnered with Consilio.io, an SAP Certified Implementation Partner recognised as a Platinum-tier SAP Concur Service Partner, to help SAP Concur customers meet e-invoicing mandates without adding new systems to their finance stack. The partnership connects eezi's compliance engine directly into the SAP Concur environments [Consilio.io](https://consilio.io) implements and supports, bringing automated e-invoicing to both sides of the transaction: outbound invoices raised by the business, and inbound supplier invoices flowing through Concur Invoice and Concur Expense.

As governments expand e-invoicing and real-time reporting mandates into new transaction types, SAP Concur customers increasingly need compliance to reach beyond core accounts payable, into invoices submitted against travel and expense claims and the outbound invoices they issue as suppliers themselves. [Consilio.io's](https://consilio.io) implementation experience across Concur Expense, Concur Invoice and Concur Travel means joint customers can bring eezi's compliance layer into their existing Concur environment as part of a single, guided rollout, rather than a separate integration project.

Two use cases sit at the centre of the partnership. On the accounts payable side, eezi acts as the connector between global e-invoice senders and Concur Invoice, receiving structured supplier invoices and matching them to the correct AP transaction, no manual entry or OCR required, and eezi is now extending that same matching capability into Concur Expense, so inbound supplier e-invoices tied to travel and expense claims are automatically matched to the relevant expense transaction. On the accounts receivable side, eezi's platform automatically formats, validates and submits compliant outbound e-invoices in more than 60 countries, including Peppol markets and country-specific platforms, giving SAP Concur customers a single compliance layer that covers invoices coming in and invoices going out.

"E-invoicing mandates don't stop at accounts payable, and increasingly they don't stop at Concur Invoice either. Extending our matching capability into Concur Expense, alongside [Consilio.io's](https://consilio.io) implementation expertise, means SAP Concur customers can stay ahead of these mandates without adding another vendor or another workflow. It's exactly the kind of partnership that lets us bring real value to a partner's client base while strengthening the relationship in the process."

Simon Geach, Head of Partnerships, Global, eezi by VAT IT

“At Consilio.io, more and more of our SAP Concur customers are asking how they will meet the e-invoicing mandates coming into force across Europe and beyond. Our partnership with Eezi meets those required and planned mandates within our clients' existing SAP Concur environment. A combined Eezi and SAP Concur solution provides system-to-system integration for automated validation and tax compliance globally, affording our customers peace of mind and enabling AP teams to focus on other BAU activities.”

Leigh-Jay Lawrence, Business Development Director, Consilio.io
